**ExTe**

Securing cargo. We invented the concept.

The new D-Series is a profitable and very cost-effective solution for timber hauliers. Our smart designs make the most out of the best qualities of both steel and aluminium.

Thanks to our uniquely wide product range, regardless of the situation, we can always offer hauliers alternative solutions that meet their need for light and strong constructions at an appealing price.

# D-SERIES

## **Weight differences between A- and D-bunks:**

If you have driven with our A-Series in the past, our D - makes an ideal alternative. All in all, the D-bunks are a very cost-effective solution for timber hauliers.

<b>Bunk A7 LH 3.0</b> weight 102 kg	<b>Bunk D7 LH 3.0</b> weight 107 kg
-------------------------------------	-------------------------------------

<b>Bunk A10 LH 3.0</b> weight 128 kg	<b>Bunk D10 LH 3.0</b> weight 139 kg
--------------------------------------	--------------------------------------

<b>Mount friction A</b> weight 9 kg	<b>Mount friction D</b> weight 16 kg
-------------------------------------	--------------------------------------

## **With ExTe, the rider gets more than just bunks**

When times are tough and margins are small, proximity to service is even more important. We have a well-developed Technical Service and good support options, partly through our own resources and partly through cooperation with our service partners, which are located all over the country and are constantly developing.

There is less room than ever for errors and downtime. This makes our unique Security Guarantee, which applies to all new products for four years, even more important.

# THE NEW D-SERIES WITH ALL THE ADVANTAGES

## Lightweight combi-bunks

The D-Series is available in four performance stages (5, 7, 10 & 12 tonnes). In fact, the weight difference between our D-bunks and full aluminium bunks is smaller than many people think. In relation to the cost of the investment, the weight difference may be of secondary importance.

## Three basic aluminium stake designs

The new Conical Stake is bevelled both inside and outside and fit both the D- and A-Series. As an accessory, bolts can be applied to the stakes, placed 35 cm apart. This makes it easier to avoid overly rough timber and facilitate flat loading. Telescopic and Euro Stakes in various loading heights are also available.

## Quick and easy installation

The new mount makes installation of the bolsters go smoothly and easily. No drilling is required. The bolsters are prepared for the easy installation of accessories, which makes the drivers' work safer and less tiring.

## Load more timber

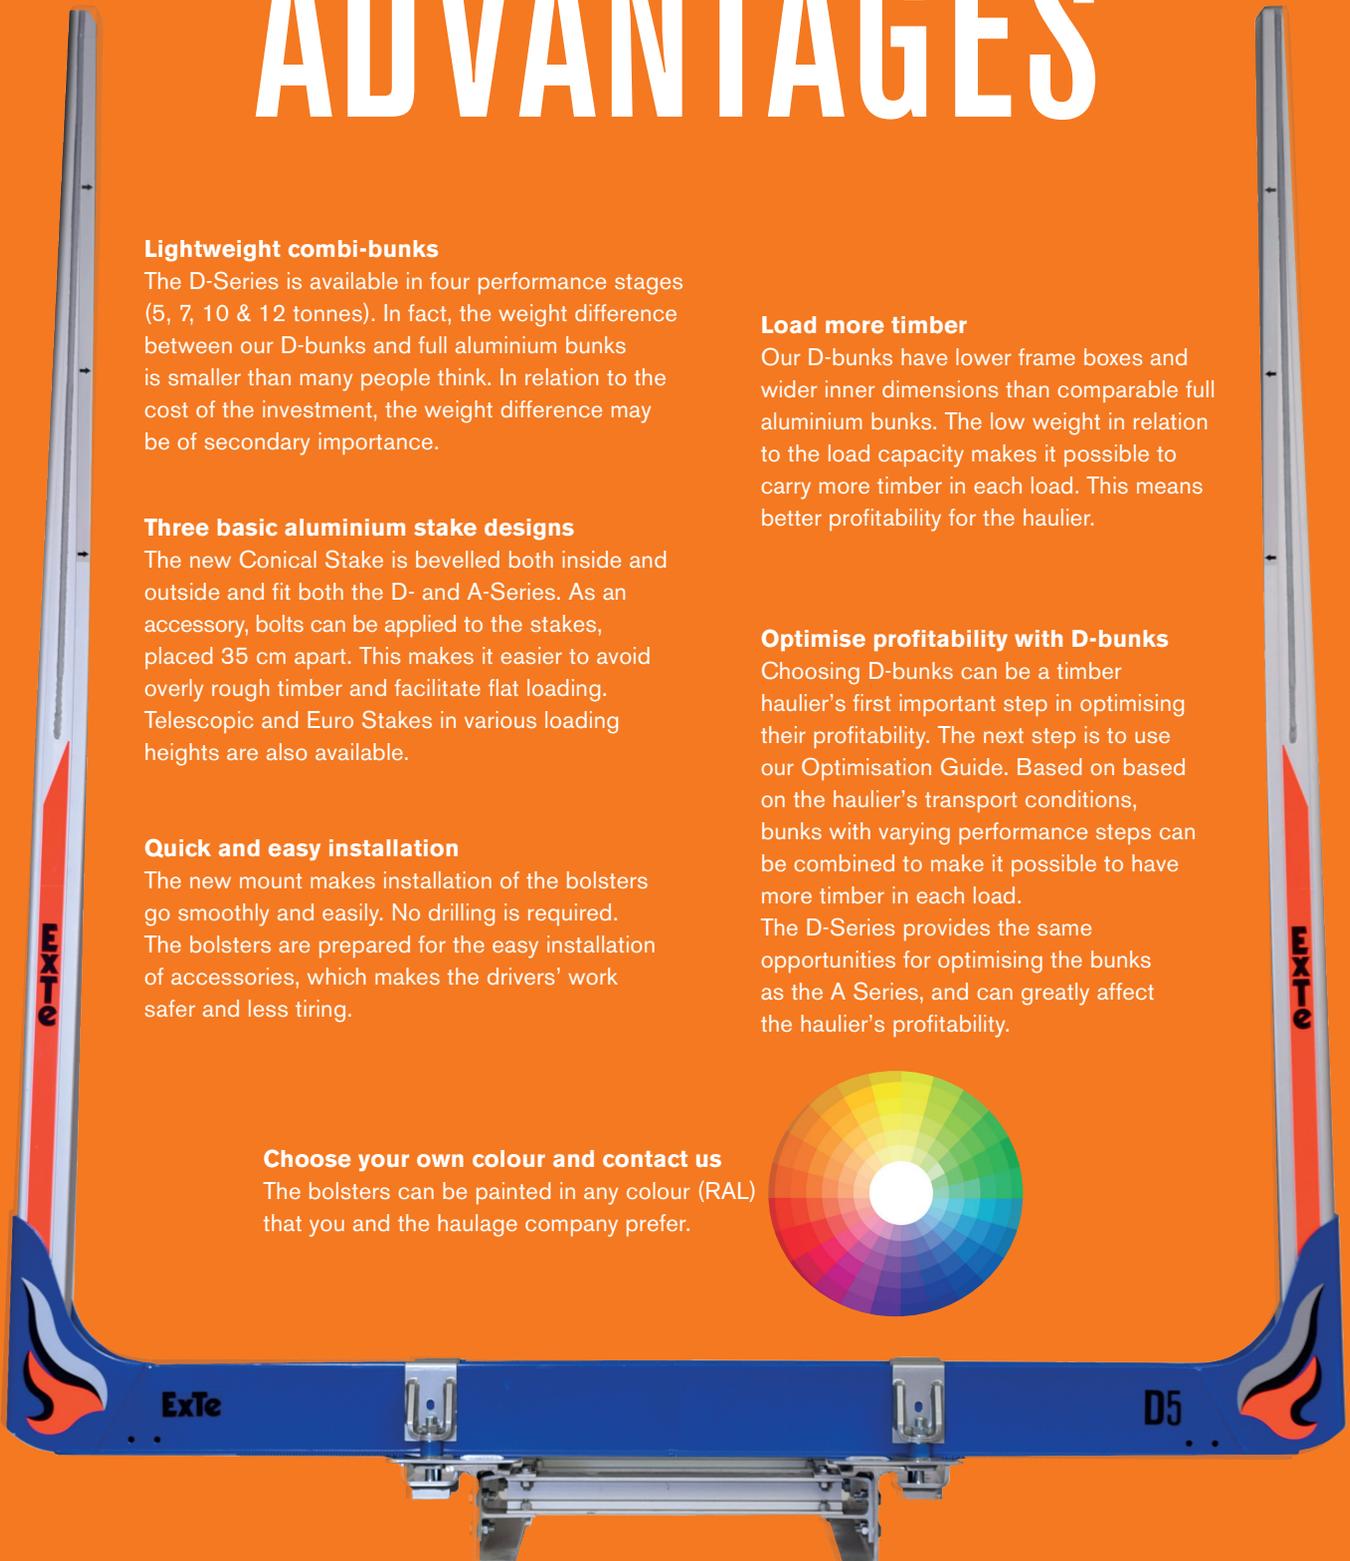

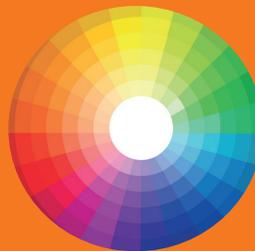

Our D-bunks have lower frame boxes and wider inner dimensions than comparable full aluminium bunks. The low weight in relation to the load capacity makes it possible to carry more timber in each load. This means better profitability for the haulier.

## Optimise profitability with D-bunks

Choosing D-bunks can be a timber haulier's first important step in optimising their profitability. The next step is to use our Optimisation Guide. Based on based on the haulier's transport conditions, bunks with varying performance steps can be combined to make it possible to have more timber in each load. The D-Series provides the same opportunities for optimising the bunks as the A Series, and can greatly affect the haulier's profitability.

## Choose your own colour and contact us

The bolsters can be painted in any colour (RAL) that you and the haulage company prefer.

# INTERESTED IN THE D-SERIES?

If you wish to know more about the D-Series, you are welcome to talk to one of our sales representatives.  
Contact your sales representative by phone at +46 (0)651-175 00 or e-mail [sales@exte.se](mailto:sales@exte.se)
