

# QL System

The quicklock wedge

## EASY TO MOVE

The wedge can be moved between sockets for different stake positions.

## LOCKING STAKES

When the stake is installed in the socket it operates the locking mechanism in the wedge.

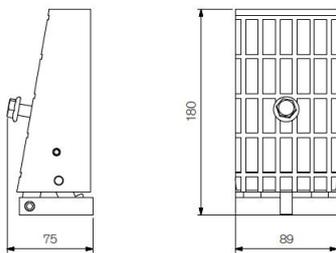

## RELEASING

A special tool is used to release the wedge before lifting the stake out.

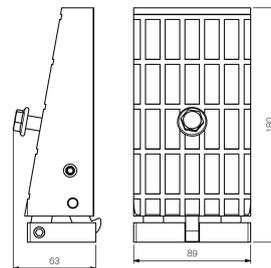

# Facts & function

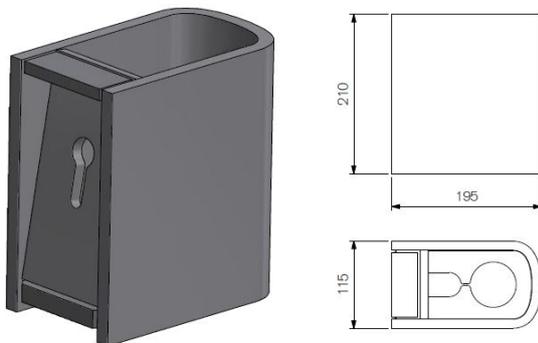

**QL wedges for C-profile (810950) and D-profile (810990) are available to be installed in QL socket (810955) for an easy way of handling different types of cargo. The stakes of aluminium makes the moving around easy and the quick lock system fixes the stakes in place.**

**810950  
C-profile**

**810990  
D-profile**

**810955**

**810944**

**The QL wedge is ingeniously simple. Stake locking has shifted from the stake to the wedge. When the stake is slid into the socket it activates the locking mechanism in the wedge, which locks and hold the stake secure. It's just as easy to release, a special key is pressed down by foot to activate the wedge again and allow the stake to pop up.**

ExTe has the market's broadest product range by far and can meet every demand. Progress that never compromises on safety is the very best warranty.
